Professional Summary

Full stack developer with a Bachelor's degree in Business Informatics (University of Costa Rica, 2025). I have worked on professional teams (Funread and 4thewords) and built complete systems on my own: an ERP + POS for a grocery store, a library management system and a bilingual digital library. I work with TypeScript, Java and Python, relational databases and REST APIs, and I like taking projects from idea to production.

Technical Skills

- **Frontend:** React, Next.js, Vue.js, TypeScript / JavaScript, HTML, Tailwind CSS, bilingual websites.
- **Backend and APIs:** NestJS, Java / Spring Boot, Python (FastAPI, Django REST Framework), C# / ASP.NET; REST APIs, microservices, Stripe payment integration.
- **Databases:** PostgreSQL, SQL Server, MySQL; Prisma, JPA/Hibernate, Entity Framework; data modeling and migrations.
- **Quality and tooling:** integration testing, Git, GitHub, GitHub Actions, Docker, Postman.
- **Methodologies:** Agile methodologies, remote team collaboration.

Professional Experience

Full Stack Developer · 4thewords

February 2025 – May 2025 · Contractor (professional services) · Remote

- Migrated the accounts service from PHP to FastAPI while keeping the JSON response contract, so the frontend and the other microservices kept working unchanged.
- Fixed bugs across several microservices: reproducing the issue, finding the root cause and choosing the most suitable solution.
- Built features in Vue.js on a production Python backend, including a configurable component with three variants based on Figma specifications.

- Worked in Agile teams with remote, multidisciplinary colleagues.

Backend Developer (Internship) · Funread

May 2024 – November 2024 · University of Costa Rica project

- Built endpoints and models with Django and Django REST Framework for an English-learning platform, and integrated them with the frontend team.
- Designed, together with the team, the database and the logic of a gamification system with rewards for students.
- Wrote integration tests for critical flows and ran safe migrations with backfills in separate steps.
- Fixed production incidents and maintained existing APIs.

Projects

La Central · Custom ERP + POS for a grocery store

React · TypeScript · NestJS · Prisma · PostgreSQL · Docker

- System that combines sales, inventory, cash register, purchasing, customer credit, supplier payments, promotions, batches, expiration dates and purchase suggestions.
- Designed for a local network: one main PC acts as the server and several registers connect through the browser.
- Sales by unit, weight and package size, with single and split payment methods.
- Case study

Obsidian Library · Library management system

Java · Spring Boot · Next.js · TypeScript · PostgreSQL · Stripe · Docker

- 69 REST endpoints organized by domain: catalog, users, loans, reservations, memberships and payments.
- Subscriptions and automated fine collection with Stripe.
- Admin and user roles with access control and traceability.
- Code on GitHub · Demo

Libra · Bilingual digital library

Next.js · TypeScript

- Website in Spanish and English, with routes and content per language.
- Catalog of classic books free to read, with browsing by category and author.

- Personal library to save the books the user wants to read.
- SEO and Open Graph metadata for indexing and link previews.
- Live site

Selvática · Website for an adventure hotel

Next.js · TypeScript · Tailwind CSS

- Website with a WhatsApp-integrated booking flow and a 100/100 Lighthouse score for performance, accessibility, SEO and best practices.
- Code on GitHub · Demo

Education and Languages

Bachelor's degree in Business Informatics (Informática Empresarial) · University of Costa Rica (UCR) · Graduated April 2025. Coursework in programming, software engineering, databases, systems analysis and project management.

Languages: Spanish (native) · English (A2–B1).
